

TANDEMPRESS CP

INNOVATION FOR YOU

Tandempress CP

Tandempress CP is the new rotary cuff and collar press by Trevil.

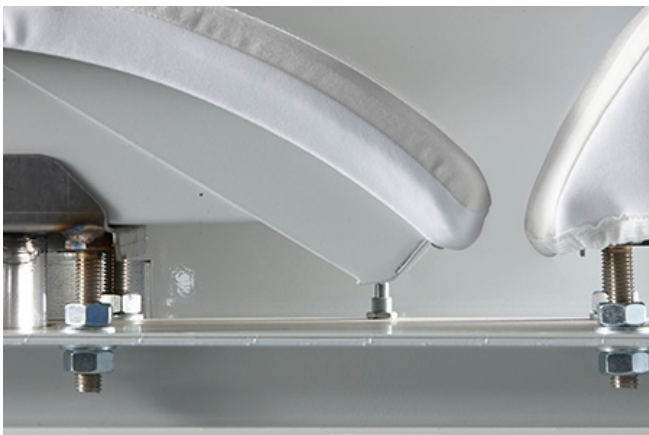

MAIN FEATURES

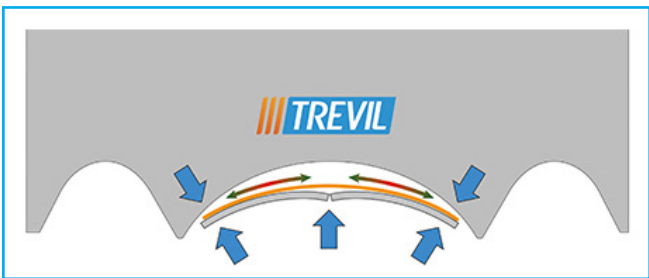

PTFE covered heads

A PTFE coating on the hot heads prevents shine on dark colors. This coating uses the same technology widely used for cookware: it resists to high temperature, to friction and to cleaning.

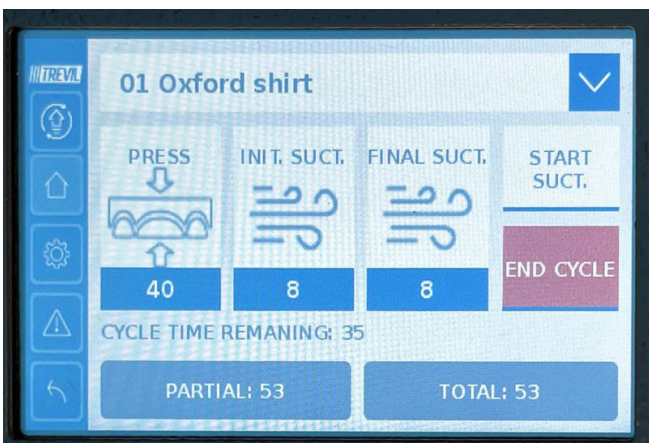

Automatic suction

The suction motor starts automatically when the operator presses the buck by placing the collar.

Collar tensioning

The collar tensioning system recovers the shrinkage that may have occurred during washing.

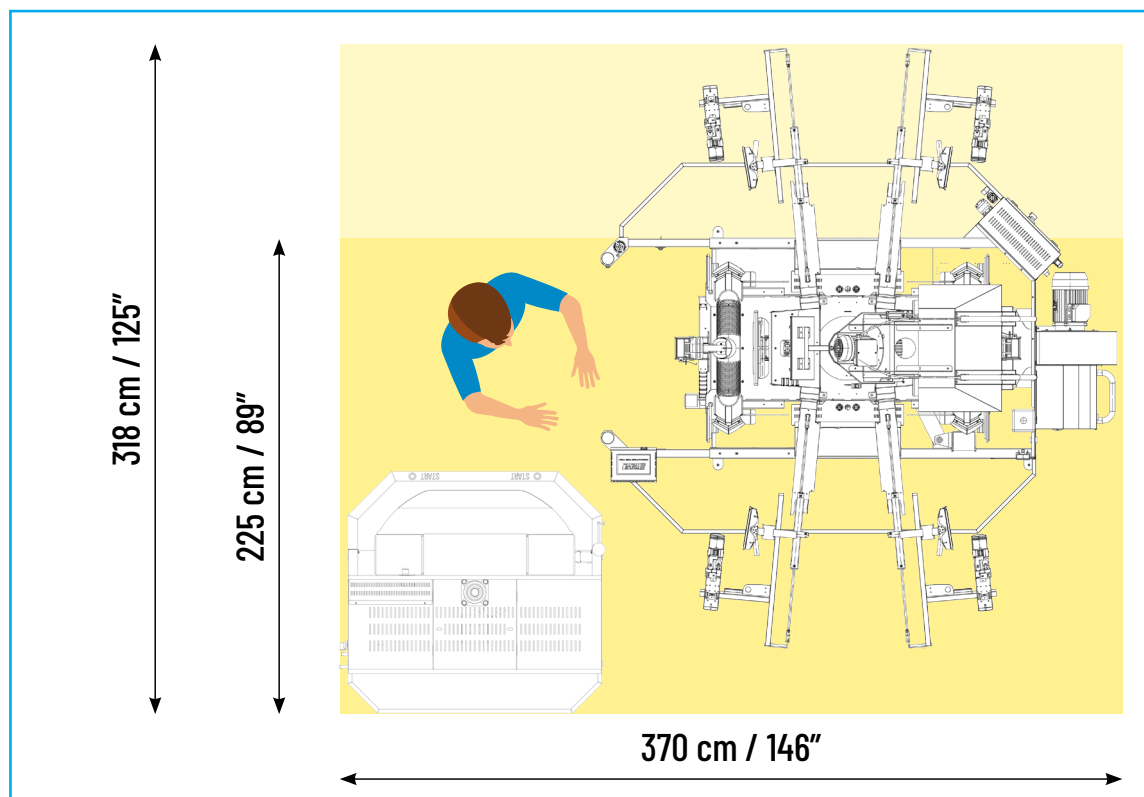

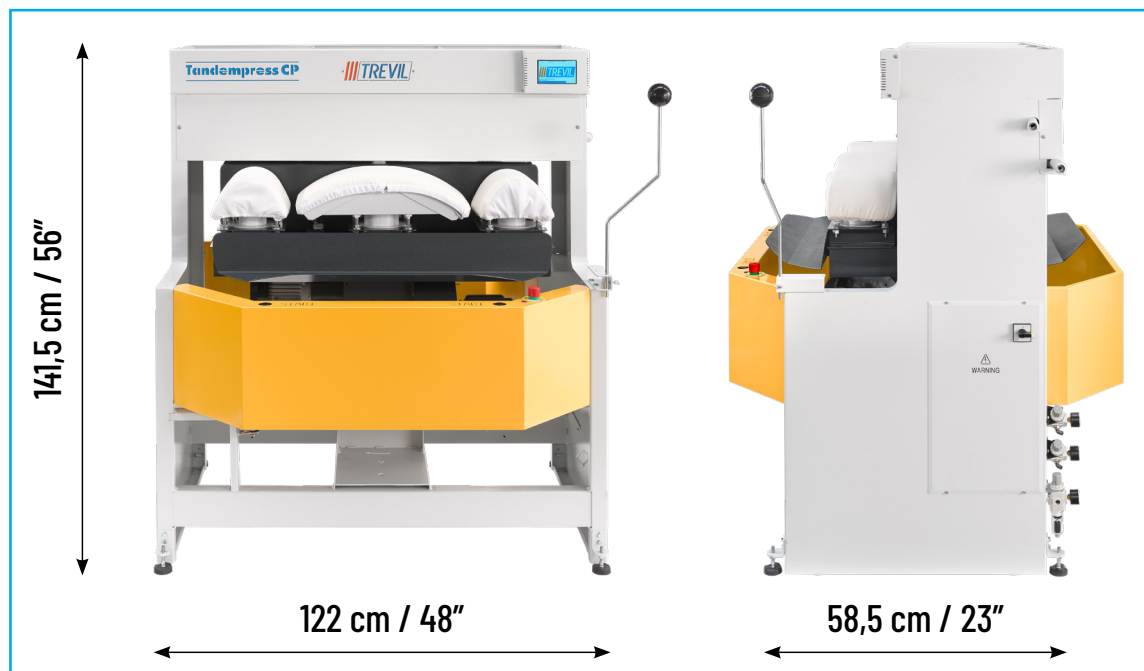

Touch screen programmer

The electronic programmer can store programs for different kinds of shirts. Each program can be modified according to individual needs.

TAKES LITTLE SPACE

Tandempress CP can be combined with the Trevitandem double buck shirt finisher or with single shirts finishers for high productivity.
